SHORE HEALTHCARE at HOME

*Comfort, convenience,
peace of mind*

When you're homebound due to illness, there's only one nonprofit, locally based choice: Shore Healthcare at Home, headquartered in Onley. For more than 10 years, we've provided care for thousands of Eastern Shore patients – right in their homes.

Why choose Shore Healthcare at Home?

Our care is among the best – nationwide

- The majority of our patients – more than eight out of 10 – report **improvement controlling pain**. That's about 20 percent better than the national average for in-home nursing care. We invite you to check our performance on other issues as well. Call **757-789-5000** to get a printed hand-out, or go online to www.medicare.gov/HHCompare
- We're the only area homecare agency with two nurses certified in wound, incontinence and colostomy care.
- Our program meets the highest standards. In fact, Shore Healthcare at Home has won the highest level of accreditation from JCAHO, an independent group that monitors health-care quality.

**Call 757-789-5000
or 800-700-6242**

High-tech tools

- Our high-tech **wound V.A.C.** equipment reduces swelling, so wounds heal faster.
- We offer easy-to-use and highly accurate **IV infusion pumps** that deliver medication without limiting your mobility.
- We're the only **all-electronic** home-care agency on the Eastern Shore. Our nurses use laptops so they can track your care efficiently.
- We offer a state-of-the-art **biofeedback machine** that trains patients to strengthen their bladders. We also have a physical therapist who is certified in incontinence management.

Pain management and chronic care

We're the only area homecare agency to coordinate with Hospice and Palliative Care of the Eastern Shore to offer certified palliative care nurses for people with **chronic or terminal illnesses**.

Help at touch of button

We're the only area homecare agency to offer **Health Watch**. This device, worn as a bracelet or necklace, is your security blanket when you're alone. It lets you summon help at the touch of a button in case of a fall or other emergency. It can even be programmed to remind you to take medicine!
